

Patient Treatment Guide
Last updated: June 2026

INTAKE PROCESS

- All new patients complete a health history form and consent agreement.
- Vital signs are recorded: BP, HR, temperature, weight, height.
- Insurance information is verified before the appointment begins.

COMMON PROCEDURES

- Blood draw: standard venipuncture, 3-5 minute procedure.
- ECG: 12-lead, electrodes placed on chest and limbs, 5 minutes.
- Suturing: sterile technique, local anesthetic applied first.
- Wound cleaning: saline irrigation, debridement if needed.

MEDICATION ADMINISTRATION

- Oral: patient must be sitting upright, taken with water.
- Intramuscular: deltoid or gluteal site, 23-25G needle.
- Subcutaneous: abdomen or thigh, 25-27G needle, 45-90 degree angle.
- Intravenous: saline lock or drip, monitor flow rate hourly.

POST-TREATMENT CARE

- Monitor patient for 15 minutes after any procedure.
- Provide written aftercare instructions in patient's preferred language.
- Schedule follow-up appointment before discharge when applicable.
- Document all procedures in EHR within 1 hour of completion.

INFECTION CONTROL

- Hand hygiene before and after every patient contact.
- PPE: gloves for all procedures, mask + face shield for aerosolizing procedures.
- Surface disinfection with EPA-registered disinfectant between patients.
- Sharps disposal in puncture-resistant containers immediately after use.
